- **AutoDesk software:** the newest version of AutoCAD, Civil 3D, Mechanical Desktop, Inventor Professional, and RevitBuilding. (on-campus, outside campus, and students)
- **MATHLAB** engineering science analysis and simulation software (network authentication)

Downloading Software Homepage

Downloading from an off-campus location

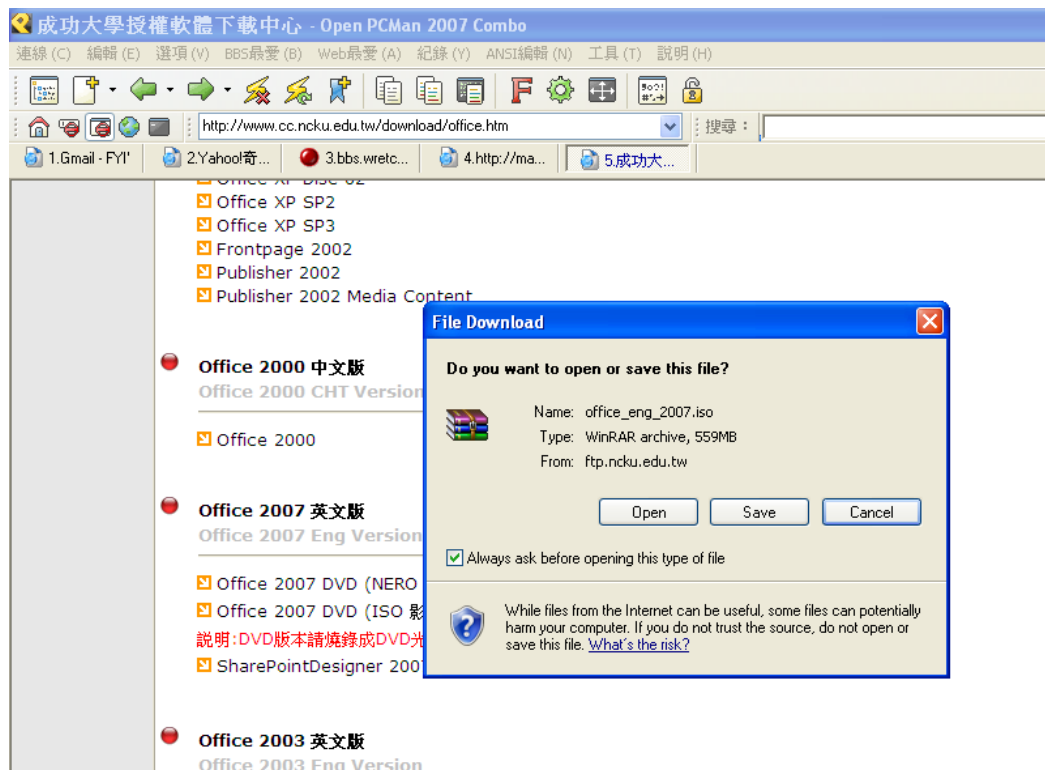

If you are downloading from an off-campus location, you will have to change your LAN settings:

Go: Tools --> Internet Options --> Connections --> LAN Settings --> (tick "proxy server") -
-> Address: rpa.lib.ncku.edu.tw --> Port: 3128

You will then have to enter your student number as the username, and your library password (tends to be the last four digits of your passport number).

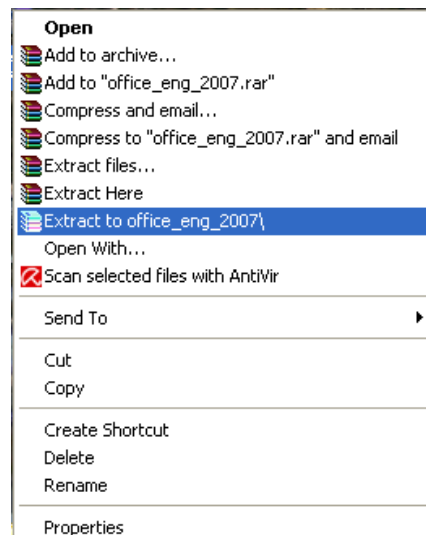

Downloading the software without burning it to disk

Go to the downloading page for the desired software and select it. The following should appear:

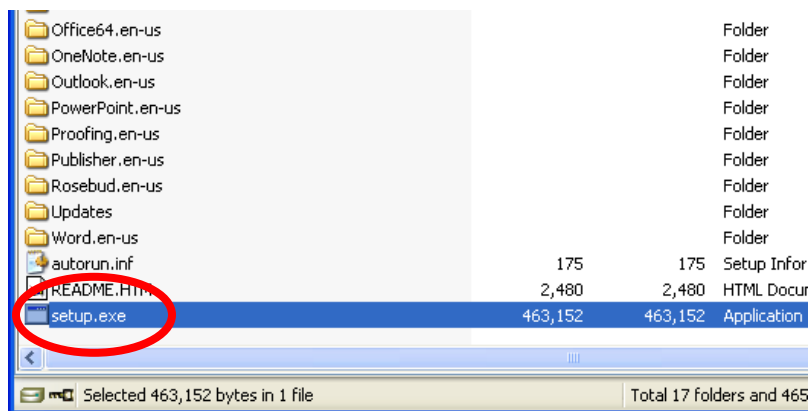

If it does not, and you are using i.e. Mozilla or such, try using *Internet Explorer* instead. If you do not have WinRAR, download it first (see link in above section).

Save the file to your desktop (this will take some time). If it saves to an *iso* file, right-click it once it has downloaded, and select *Extract to [software name]* (if you do not have WinRAR, once again see *Links* section above):

Once extracted (this may take some time), open it and select the *setup.exe*.

Enter the key number for the software if required (see Links section above), tick the *Accept* box (or equivalent), continue, and choose *Update* if you have a previous version already installed on your computer. You will have to reboot your computer once finished to finalize the setup.
